

Track Plan Information

- Scale O or S.
- Min. Radius - 24"
- Era: 1950s to Present
- Turnouts: No. 4 in S scale, No 3 or 2.5 in O scale

Design Summary

This layout represents an industrial city theme with the railroad serving a large factory and a small fishing plant. There is a passenger station as well as an area for an engine house. The curves are tight with just a 24" minimum radius. This would work fine for an interurban line in O scale or a railroad with small switcher engines and 40' cars in S scale. It is expected that all the buildings would be removed from the railroad for transport making the benchwork sections fairly thin at 6-8" inches in total depth.
